CISCO COMPUTER NETWORKING LAB INAUGURATION

On 29th November 2017, Director of TASK (Telangana Academy of Skills Development) **Mr. Bhasker Reddy** has inaugurated CISCO Computer Networking Lab. Networking switches, routers and wi-fi routers worth about Rs. 5 lakhs have been purchased for this lab. Our institution has signed an MOU with CISCO and this lab will be utilized for training the B. Tech. final year students of ECE and CSE branch, for CISCO networking certifications.

The two trainers from our institution **Mr. K. Srikanth Reddy & Mr. ChandraSena Chary** has already started the theory classes for ECE branch final year students. These certifications enhance the job opportunities for the students in Multi National Companies. Day by day the use of computer networks is increasing and hence training the students in the field of computer networks has gained more importance, CISCO director **Mr. Shubhajit Jagadev** observed.

On this occasion, **Mr. Shubhajit Jagadev** suggested that the students should be trained, so that the fear of operating networking elements be eliminated and they should be allowed to use these important elements of networks to such an extent that the student should feel like playing with routers and switches for providing solutions for any challenging networking problem.

At present the students have only theoretical knowledge about these networking components and hence CISCO is striving to train the maximum students with the help of **Sree Chaitanya College of Engineering** by having MOU with them, to meet the growing needs of human resources in the field of computer networks.
